Profile

Fullstack Developer with hands-on experience in Angular/TypeScript (frontend) and Python/Django (backend), gained through a full-time professional training program and a two-month internship as a Django developer. Reliable, eager to learn, and quick to get up to speed on new technical requirements.

From my experience as a teacher and pastoral counselor, I bring patience and the ability to explain complex matters clearly. My goal: to specialize in backend development while continuing to build on my frontend skills.

Technical Skills

- **Frontend:** Angular, TypeScript, JavaScript, HTML5, CSS3, Responsive Design
- **Backend:** Python, Django, Django REST Framework, REST APIs
- **Databases:** PostgreSQL, SQLite
- **Tools & Methods:** Git, GitHub, Agile Methods
- **Additional Skills:** Testing, IT security (basics), AI fundamentals

Soft Skills

- **Communication Skills:** 10 years of experience in counseling conversations as a pastoral counselor, skilled at explaining complex matters clearly
- **Teamwork:** close coordination in a four-person team on the "Join" project (task distribution, collaborative problem-solving)
- **Attention to Detail:** honed through work as a translator, where precise rendering is essential
- **Adaptability:** successful transitions between different professional fields and fast onboarding into new technical and subject-matter topics

Selected Projects (Developer Akademie)

- **[Videoflix](#) (Backend, 07/2026–08/2026, 3 weeks)** — REST API backend for a Netflix-style streaming platform, 10 endpoints. JWT authentication via HttpOnly cookies, asynchronous email-based account activation, video transcoding (ffmpeg) via django-rq, and adaptive HLS streaming at multiple resolutions.
- **[Coderr](#) (Backend, 05/2026–06/2026, 4 weeks)** — Backend API for a freelance marketplace platform, 23 endpoints. Role-based permission system, offer/order workflow with snapshot logic (decouples orders from later changes to offers), filter/search/statistics functions. Independent deployment on a VPS (Nginx, Unicorn, Supervisor, SSL via Certbot, Fail2ban).
- **[Join](#) (Frontend, 02/2026–03/2026, 5 weeks)** — Kanban task manager built with Angular, integrated with Firebase (auth & database). Developed in a four-person team: project planning/organization, implementation of the sign-up area, contact list, add-task feature including dialogs, and project-wide debugging.
- **[Personal Portfolio](#) (Frontend, 02/2026)** — Portfolio website built with Angular and TypeScript showcasing 6 of my most notable projects; About Me section, project overview, skills section, and contact option. Independently designed and developed.
